

Responder Assets Management System (RAMS)

Project Summary:

Visual Consulting participated in the design and development of the Windows and Web based application for first responders to manager response to special events, emergencies and disasters.

The solution involved the implementation of ActiveX Controls utilized by both Windows applications and Web applications. The application:

- Provided the most immersive situational awareness data and information available prior to 9-11.
- Implemented in C++ for optimal performance and graphics rendering performance.
- Provides support for rendering ESRI Shape files with much higher performance than other technology commercially available.
- Provides support for Arc, GeoTIFF and Mr. SID files.
- Provides a COM based method of extensibility by 3rd parties.
- Integrates with IPIX graphics viewer and Microsoft Office Professional Suite.

The solution has been a tremendous success and is now sold as RAMSAFE by Previstar, Inc., as an application "Designated" by the U.S. Department of Homeland Security.

VISUAL CONSULTING®

WHAT DO YOU WANT TO BUILD TODAY?™

Client:

BWXT-Y12 National Security Complex

Location:

Oak Ridge, TN

Highlights:

- Designed and developed initial prototype and implemented new .Net version of system
- Designed system database and implemented in MS SQL Server
- Visual Consulting developed the only parts of the system used at the U.S. Winter Olympics in 2002.
- Visual Consulting received an award from the Federal Laboratory Consortium for Technology Transfer for their role in developing the technology.
